

Petition to Request Dredging and Maintenance of Tidal Waterways

We, the undersigned, have a residence in Tuckerton, in Ocean County, New Jersey.

All of our residences are located on tidal waters on and around Barnegat Bay. We are strongly requesting that relief be given in the process of dredging and dredge material placement.

We understand there are a number of dredge material sites in the above areas. The troubling circumstance is that, for various reasons, these locations are not made available for critical waterway maintenance.

We understand environmental impact. We also understand that not having access to these dredge material sites results in a negative impact on quality of life as well as safety issues for resident boaters.

We would appreciate meeting with the NJDEP department responsible for the above issues. In doing so, we believe that we will all benefit and come to an amicable agreement.

Thank you,

Very Concerned and Frustrated Residents
